

## Bihar Vaidik Brahmin: An Archeological View

Genetically, Brahmins in India are two types: (1) DNA Z93 and (2) DNA F. The Z93 were the unethical and immoral Avestans (South Bactria) who robbed Avesta with fictional Yajna rituals to market their fictional gods Vishnu, Shiva, and Indra as snake oil. They were expelled from Avesta to Kashmir by a Persian king, Xerxes. The Z93 were split into two groups: (1) Kashmiri Pandits and (2) Bihar Vaidikis. The F were Hindus converted into a fictional Brahmin caste invented by the Greeks to work in the Greek temple business as indentured labor. Thus, Brahmins come in three flavors: Kashmiri Pandits, Bihar Vaidikis, and Temple Brahmins (Pujaris).

The temple god was a Greek invention. It was a highly profitable business. People were robbed with fictional stories of the fictional temple gods with supernatural powers. The Greeks employed the unethical and immoral Z93 in Kashmir to invent the fictional stories in a synthetic language of artificial rules of syntax and grammar, called Sanskrit. All Sanskrit literature was recent Greek financed, and Z93 invented fictional stories of non-verifiable and nonsensical statements of unnatural characters and events. In the Sanskrit rubbish the delusional Z93 glorified themselves as gods. The recent Sanskrit fiction was actively promoted as the divine truth.

Around 500 CE, after the collapse of the Gupta Empire, the Greeks moved to the Nalanda area in the Bihar State. They imported some Z93 from Kashmir at great expense to deliberately destroy the Nalanda Hindu University and Hindu civilization. When the British East India Company moved to Calcutta, some Z93 moved from Nalanda to Calcutta. The Greek stooges turned coats to become British stooges to actively promote the recent Sanskrit rubbish as the ancient Hindu civilization.

The DNA samples as recorded in the 2011 Census of India have a fascinating story of the Z93 (Avestans) in India to tell.
