

## Tamil Nadu State: An Archeological View by Potluri Rao In Seattle ©2018 (CC BY 4.0)

People of the Tamil Nadu State are the DNA H who lived on the West Coast 200 miles to the west of Mumbai 500 feet below the current sea levels 40,000 years ago. The glaciers started to melt 20,000 years ago, and the West Coast was totally submerged 10,000 years ago. The H were split into Tamil and Teli. The Tamil moved to the Tamil Nadu, and the Teli moved to the Narmada River.
