

## **Hindu Logic: An Archeological View**

Hindu logic was developed by Hindus (DNA F) who lived in Peninsular India for over 60,000 years in peace and prosperity. Professors Vasudeva Krishna, Siddhartha, Ajatashatru, Mahavira, and Adi Shankara wrote books on Hindu logic in the Grandhika language of Hindus. Unfortunately, the 60,000 years of Hindu history, civilization, and logic are now lost; they were deliberately and totally destroyed by the Europeans (DNA R1), who entered India only 4,000 years ago from Bactria and lived only along the Indus River in Pakistan.

Greek logic was developed by Greeks (DNA R1b) and is currently known as Aristotle's logic. It is the European logic, the exact opposite of the Hindu logic.

Greeks entered India only after Alexander. A subgroup of R1b called Kushans lived in Kashmir. Kanishka (200 CE) wanted to destroy Hindu logic that did not agree with Greek logic. Kanishka discovered some delusional, unethical, and immoral Avestans (DNA Z93) who were kicked out of Avesta into Kashmir for robbing Avestans with fictional rituals called "Yajna." He renamed the untouchable Avestan refugees as Brahmins and invented a synthetic language called "Sanskrit" as their language to conceal their scandalous past. All the Sanskrit literature was financed by Kanishka and invented by his Brahmin stooges to trash Hindu logic into Aristotle's logic. The Sanskrit rubbish was actively promoted by Kanishka as the ancient Hindu religion. Kanishka destroyed 60,000 years of Hindu history, civilization, and logic in a few decades.

The 2011 Census collected detailed data on 22 languages and 2,200 dialects. We developed computer models to digest the massive data and transform it into human-readable format. The Census data revealed a fascinating story of the now-lost Hindu civilization of 60,000 years. We developed computer models of the landscape to validate the Census findings. Sanskrit was a synthetic language of only the Avestan of the untouchable refugees and the Grandhika of Hindus. Using scientific tools, we purged Avestan from Sanskrit to excavate fragments of the original Grandhika on Hindu logic. We reconstructed Hindu logic from the excavated fragments.

The archeological excavations of the Hindu DNA and logic have profound logical implications on our current thinking on scientific reasoning. In summary, the Hindu logic of hypothesis testing is Science; the European logic of deduction from axioms is Religion.
