Kalibangan (4), Rakhigarhi (5), Ganweriwala (3), Mohenjodaro (2), and Naushara (1) are well publicized as the Indus Valley Civilization sites to claim that Indians were Europeans who moved to India 4,000 years ago along the Indus River from Iran to Pakistan to India. The people who invented the false theory of human history were ignorant of history, geology, geography, and culture. Asians (DNA C and F) moved from Somalia to the Red Sea to the Persian Gulf to Gujarat to Kalibangan to Rakhigarhi to the Yamuna River to Bangladesh to Indonesia 60,000 years ago. The people who moved from Iran to Pakistan to India were the Europeans (DNA R1). They were the recent primitive cultures of warmongers constantly at war to kill each other, evolved from the Ice Age and the Stone Age.

The map was generated from the NASA satellite images to reflect the landscape at the time Asians moved from Somalia to Indonesia 60,000 years ago. At that time, much of the world was covered with glaciers, and the seawater was 500' below the current levels.

The Indian

monsoon winds blew from the Arabian Sea to the Bay of Bengal. The Baloch and Aravalli Ridges are perpendicular to the winds, and the land between the two ridges had an abundant supply of rainwater. The current Thar Desert was a fertile valley. The Baloch and Saraswati rivers were rainwater rivers above the flood line (200'). Asians lived only along the two rivers to avoid the frequent natural flood disasters at lower elevations. The Indus and Sutlej rivers were in the flood zone avoided by the Asians like the plague.
